SUMMARY

Electronics & Computer Engineering graduate from VIT Chennai with strong expertise in Machine Learning and Computer Vision. Experienced in developing deep learning models, automated data pipelines, and real-time tracking systems. Passionate about applying AI and machine learning to solve real-world problems and drive impactful tech solutions.

EXPERIENCE

Hindustan Aeronautics Limited

Aug. 2023 – Sept. 2023

Technical Intern

India

- Gained valuable exposure to aerospace systems and engineering processes within a high-tech manufacturing environment.
- Applied technical knowledge and engineering principles to support practical systems workflows.

PROJECTS

Autonomous Prospect Search Agent

Jan. 2026

- Designed and implemented an autonomous software agent engineered to automatically discover B2B companies and professional contacts.
- Programmed the agent to filter results based on a specific Ideal Customer Profile (ICP) using publicly available data, demonstrating strong skills in automation, data extraction, and backend logic.

Formula 1 Prediction Model

Dec. 2025

- Developed a predictive modeling tool focused on Formula 1 motor racing.
- Utilized Python to analyze historical data and variables to build a model aimed at forecasting race results and performance metrics.

Job Search Automation Tool (Jobhunt)

Sept. 2025 – Nov. 2025

- Created a customized, programmatic solution to streamline the job hunting and application process.
- Leveraged Python to automate repetitive search tasks, demonstrating a practical application of scripting to solve real-world productivity challenges.

Microplastics Detection Using Machine Learning

Mar. 2024 – Jul. 2024

- Developed machine learning models for predicting microplastic contamination in soil samples.
- Built comprehensive data preprocessing pipelines and feature engineering workflows for environmental data analysis.

Hyperspectral U-Net Metal Classifier

Jan. 2024 – Dec. 2024

- Implemented U-Net architecture for hyperspectral image segmentation, achieving over 85% accuracy in metal classification.
- Developed a real-time classification interface using Streamlit for interactive model deployment and practical applications.

EDUCATION

Vellore Institute of Technology (VIT)

Jul. 2021 – May 2025

B.Tech in Electronics & Computer Engineering

Chennai, India

- **CGPA:** 8.18 / 10.0
- **Coursework:** Machine Learning, Computer Vision, Signal Processing, Data Structures, Algorithms, Embedded Systems, and Hardware-Software Integration.

SKILLS

Programming : Python, Java, JavaScript, HTML, R, R Markdown

Libraries & Frameworks : Scikit-learn, Pandas, NumPy, Streamlit, U-Net

Developer Tools : Git, GitHub, Jupyter, VS Code

Languages : English (C1), German (A1)
